IT & ITC ENCLOSURES

Do you need support with organizing your network and protecting your IT equipment?

Are you looking for enclosures that organize your network infrastructure and protect your equipment from damages? We understand the importance of reliability in the IT and telecommunications industry.

As a constructor and manufacturer of enclosures, we offer solutions that are not only functional but also easy to adapt. We create products based on our own designs or provided documentation.

Thanks to our team of designers, we can modify every detail – from the mounting method, through the cooling system, to the internal layout.

If you need a cabinet with space for active and passive devices, proper ventilation, and cable access – that's exactly what we do.

Our clients appreciate our flexibility – we design enclosures tailored to specific applications and working environments.

Contact us – we can design an enclosure exactly as you need it.

INDUSTRIAL ENCLOSURES

Does your installation require a durable and safe installation?

Do you have a project that requires a durable and secure enclosure for electrical or control devices? Or maybe you only know how the installation should work but you are looking for someone to select the enclosure and equip it with the necessary components?

We create industrial enclosures that work as switchboards, automation cabinets, or protective covers for demanding equipment. We cooperate both with clients who have technical documentation and those who need help in developing their solution.

Our team of designers and electricians can design and build an enclosure from scratch – tailored to the specific working environment and type of installation. We select appropriate materials, use proven ventilation and mounting systems, and also offer electrical equipment.

**Call or write to us – we can select
the enclosure for your project.**

OUTDOOR CABINETS

Looking for an enclosure that can handle any weather and protect your network?

If your installation operates outdoors, it needs enclosures that survive all weather conditions and remain functional for years. We manufacture outdoor telecom cabinets, known in the industry as outdoor cabinets or street cabinets, which serve as signal distribution points – both fiber optic and cable.

They are used by telecom operators, housing estate network installers, and power companies. Our enclosures are made from durable materials resistant to weather conditions, UV radiation, and vandalism.

Clients can use our design or provide their own documentation – we take care of the rest. Cabinets can be equipped with cooling and heating systems, cable mounting elements, batteries and anything the installation requires.

**Order an enclosure resistant to time, weather,
and environment.**

DATA CENTER

Planning your own Data Center and don't know how to start?

Are you building your own server room or need a reliable but compact data processing solution? We provide enclosures for Data Centers, which are the foundation for the reliable operation of servers, emergency power systems, and cooling. We design both large solutions – for mounting multiple cabinets – and smaller, integrated Small Data Box systems, ideal for small companies, local governments, or educational institutions.

Our data center solutions are based on many years of experience and cooperation with clients – you can provide us with your design, but if you don't have one, we develop it together with you. We support the entire process: from concept, through needed equipment, to implementation.

Design your server room with us – functional, safe, and ready for growth.

PREFABRICATION

Do you want a ready enclosure with all equipment – without wasting time on assembly?

Do you have a ready enclosure and devices that need to be installed in it? Or maybe you want us to prepare everything from A to Z? Prefabrication is something we do quickly, precisely, and according to your documentation.

We install equipment, perform wiring, prepare mechanical and electrical components. This saves you time on installation and avoids errors that often occur during on-site assembly.

If you don't have a ready design – that's not a problem either. We can arrange together how the solution should look and manufacture it at our facility. We prefabricate both our enclosures and those entrusted by clients.

For projects that require FAT, we have a dedicated space for it to take place strictly according to safety rules.

Tell us what you need – we will assemble it ready to operate.

DISPATCH WORKSTATIONS

Need to create an ergonomic and user-friendly workspace?

At the center of all our solutions is the person. We create with their safety, comfort, needs, and productivity in mind.

Thanks to experience gained across various industries and attention to the latest design trends, we excel at recognizing customer needs and tailoring designs to meet them.

Our dispatching workstations are used by operators in police command centers, ITS management centers, control rooms in power plants, chemical plants, gas facilities, water treatment plants, and other industrial and commercial facilities.

They are made from the highest quality materials and designed for 24/7 use. Thanks to their modular construction, they can be configured in various ways.

We provide all components of a modern dispatch center – from solution conception, through basic and detailed designs (including all certifications and permits), to on-site implementation and service.

ZPAS. Your partner in creating modern dispatch centers.

ZPAS

ABOUT US

Paweł Mierzejewski
CEO ZPAS S.A.

The crucial parts of our business model are the ideas we develop together with our customers. It is in response to their real, practice-driven needs that ZPAS solutions are created. We continually emphasize that partnership with our customers is absolutely core to us. Meetings and audits conducted by our partners are an important part of our cooperation, contributing to the improvement of processes, technology and quality of final products, which contributes to the development of the entire company.

If you want to go fast, go alone. If you want to go far, go together with someone.

A handwritten signature in white ink, reading "Paweł Mierzejewski". The signature is stylized and fluid.

Innovation and development

ZPAS bases its development on investments in human potential and modern machinery. From a small experimental plant in Przygórze, we have grown into a company employing about 800 people in four production plants. Our solutions are used by companies such as GE, Siemens, and ABB.

Values and community

We care about the satisfaction of our customers, employees, and suppliers. We support the environment and the local community by promoting culture, sports, and social development. Our actions are based on values such as respect, honesty, not-to-blame philosophy, and uniqueness.
